- For electric vehicle charging only.
- This product must be properly grounded when used.
- Do not put fingers into the charging plug.
- **This product does not contain user-serviceable parts, please do not try to repair or maintain this EV charging cable on your own.**

Using the Adjustable Digital Charge Controller with Delay Timer

In order to switch charging current, make sure the power plug is firmly inserted into the mains socket and the charging plug end to the EV vehicle is disconnected, and then press the blue switch button (shown above). You will then be able to successfully adjust and set the charging current.

Charging Procedure

Follow these steps for easy charging...

1. Drive as close to the 3-pin socket as possible.
2. Make sure your car is unlocked with no charge settings/timers turned on.
3. Plug the vehicle end into the vehicle – make sure to firmly push so the pins are latched.
4. Plug the 3-pin plug end into your charging socket and turn on.
5. Adjust power and timer delay to desired optimised charging cycle.
6. Lock your car and leave to charge (also locks the charging cable if the car supports this feature).

After charging always remove the charging plug from the car first and then unplug the charging unit's 3-pin plug.
